NCRBC National Contingency & Remote Backup Centre

NCRBC is the only SMGCS Level 4 contingency and backup platform you need to remotely manage multiple airports, each with own camera feeds and operational requirements.

With NCRBC, you are always prepared to manage real-time situations as they unfold at multiple airports. From runway closures, to no-tower and complete airport closures, the platform provides a single controller with the power to manage traffic with the capability automatically divert to other airports.

As a Centre, Having the flexibility and ability to manage multiple independent regulations and procedures on a per airport basis are vital in coping with multiple concurrent environments.

The flexibility on a per airport basis includes:

- **Local and country regulations**
- **Separation wake model (including all RECAT / TBS models)**
- **SOP & MANOPS**
- **EMER procedure and settings**
- **Handoff procedures for integration with APP/DEP (supports AMAN/DMAN/XMAN)**
- **Semi and fully automated diverts to other airports**
